Professional Summary

Computer Science undergraduate with hands-on experience in data analytics, backend development, dashboard creation, and automation systems. Skilled in Python, SQL, Pandas, FastAPI, Django, Streamlit, and data visualization tools. Built intelligent analytics dashboards capable of automated data cleaning, profiling, insight generation, and visualization. Interested in data-driven systems, analytical workflows, and scalable software solutions.

Technical Skills

- **Languages:** Python, SQL, JavaScript, C
- **Frameworks/Tools:** Streamlit, FastAPI, Django, Pandas, Plotly, Selenium
- **Databases:** PostgreSQL
- **Visualization:** Plotly, KPI Dashboards, Correlation Heatmaps
- **Concepts:** Data Analytics, Data Cleaning, EDA, REST APIs, Automation, Backend Systems, Statistical Analysis
- **Platforms:** Git, GitHub, Linux, AWS EC2, Postman

Experience

Web Development Intern — Vyntyra Consultancy Services

Jun 2025 – Aug 2025

- Worked on backend development, debugging, and feature implementation for real-world web projects.
- Collaborated in agile workflows and contributed to development and support activities in a virtual environment.
- Assisted in maintaining scalable backend workflows and debugging production-related issues.

Projects

Smart CSV Analytics Dashboard

Python, Streamlit, Pandas, Plotly

- Developed an intelligent analytics platform that automatically cleans, profiles, and visualizes uploaded CSV datasets.
- Implemented automated schema detection, missing-value handling, outlier analysis, and correlation analysis.
- Built interactive dashboards featuring histograms, pie charts, heatmaps, KPI reporting, and smart analytical insights.
- Enabled downloadable cleaned datasets and automated insight generation for arbitrary datasets.

Scalable Web Scraper

Python, Selenium, Pandas

- Built a scalable scraping system supporting dynamic user input, pagination, and deduplication workflows.
- Extracted and processed 1000+ records from dynamically rendered e-commerce websites.
- Designed automated workflows for data validation, cleaning, normalization, and storage using pandas.
- Debugged real-world scraping issues involving dynamic DOM rendering and asynchronous content loading.

Finance Tracker

Django, PostgreSQL

- Built a financial management application with transaction tracking and expense analytics.
- Developed backend models and integrated PostgreSQL database operations.

- Implemented data visualization and analytical summaries for spending insights.

AI Plant Disease Detector

TensorFlow, Python, Gradio

- Built and deployed a CNN-based image classification system for plant disease detection.
- Trained models on 20k+ images and deployed live inference using Hugging Face Spaces.
- Implemented preprocessing, model optimization, deployment, and real-time prediction workflows.

Education

Sreyas Institute of Engineering and Technology

2023 – 2027

Bachelor of Technology in Computer Science Engineering
CGPA: 7.24/10

Institute of Electronics, Secunderabad

2021 – 2024

Diploma in Cloud Computing and Big Data

Certifications

- CS50 Web Programming with Python and JavaScript
- AWS Educate Cloud 101
- Postman API Fundamentals Student Expert

Additional Information

- Actively practicing Data Structures and Algorithms.
- Interested in analytics systems, backend engineering, automation, and scalable software development.
- Built and deployed multiple real-world applications involving dashboards, APIs, analytics workflows, and ML systems.
